Animation

Animator Controller

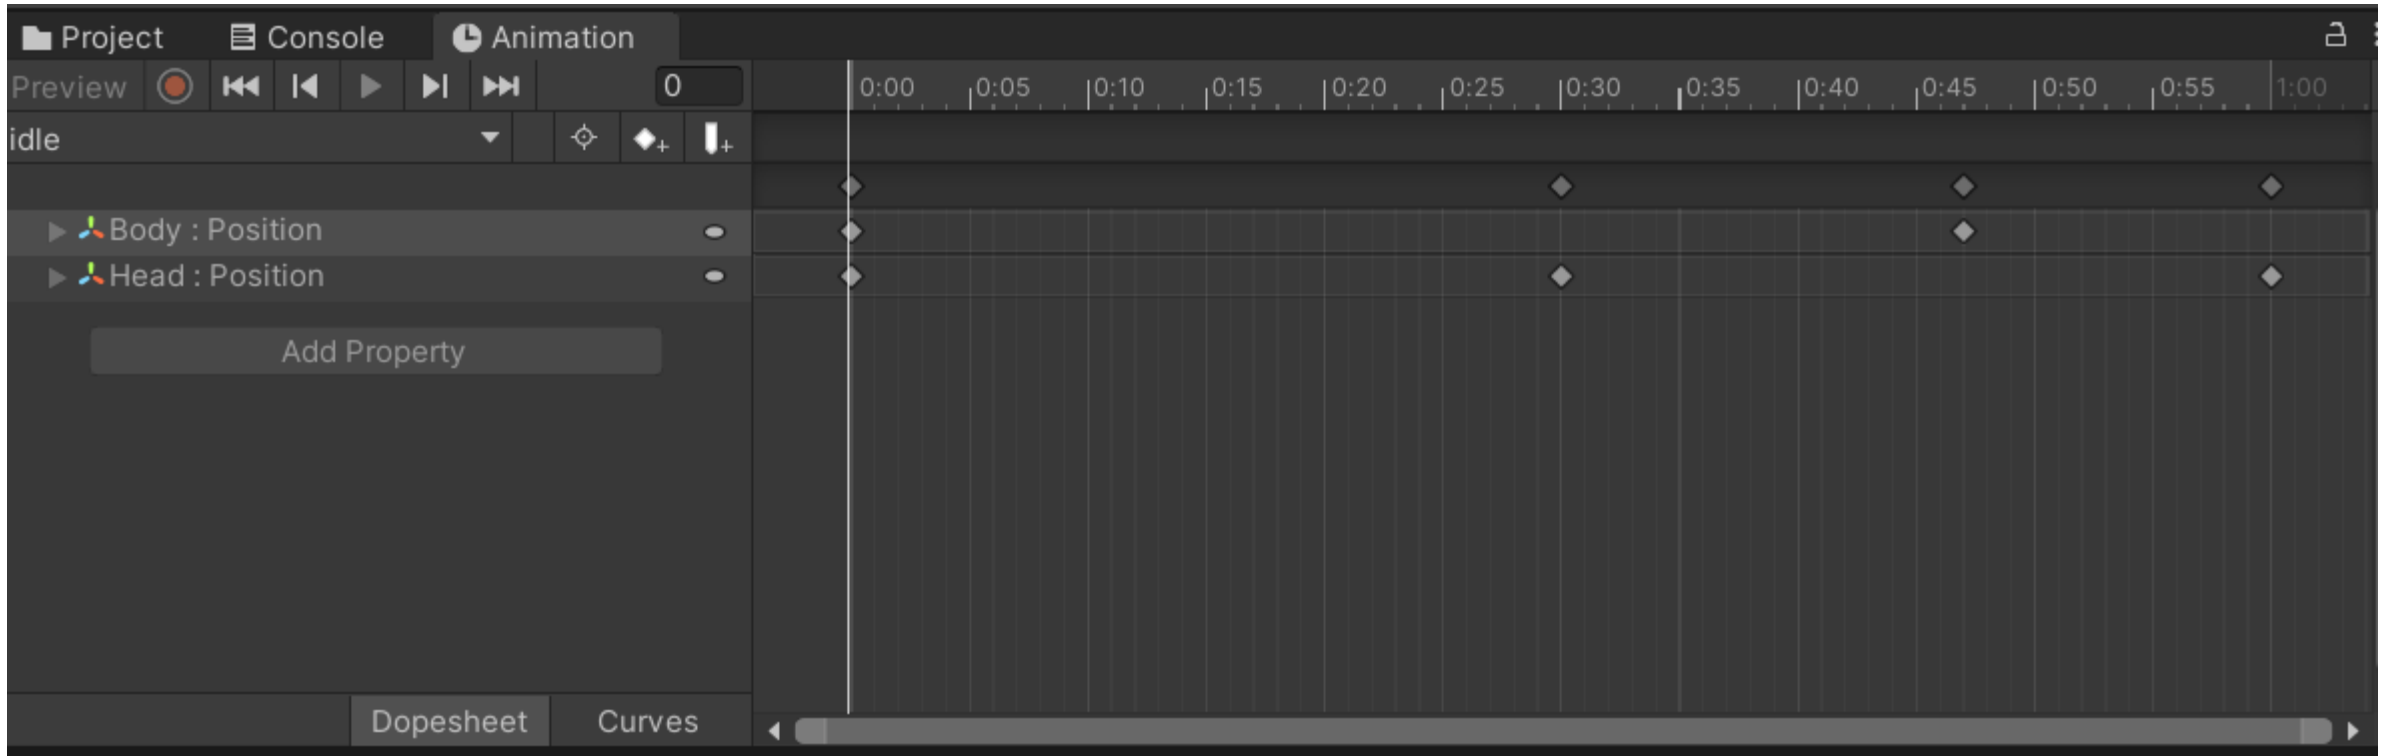

Animator Controller

Buat State baru dengan nama idle dengan cara:

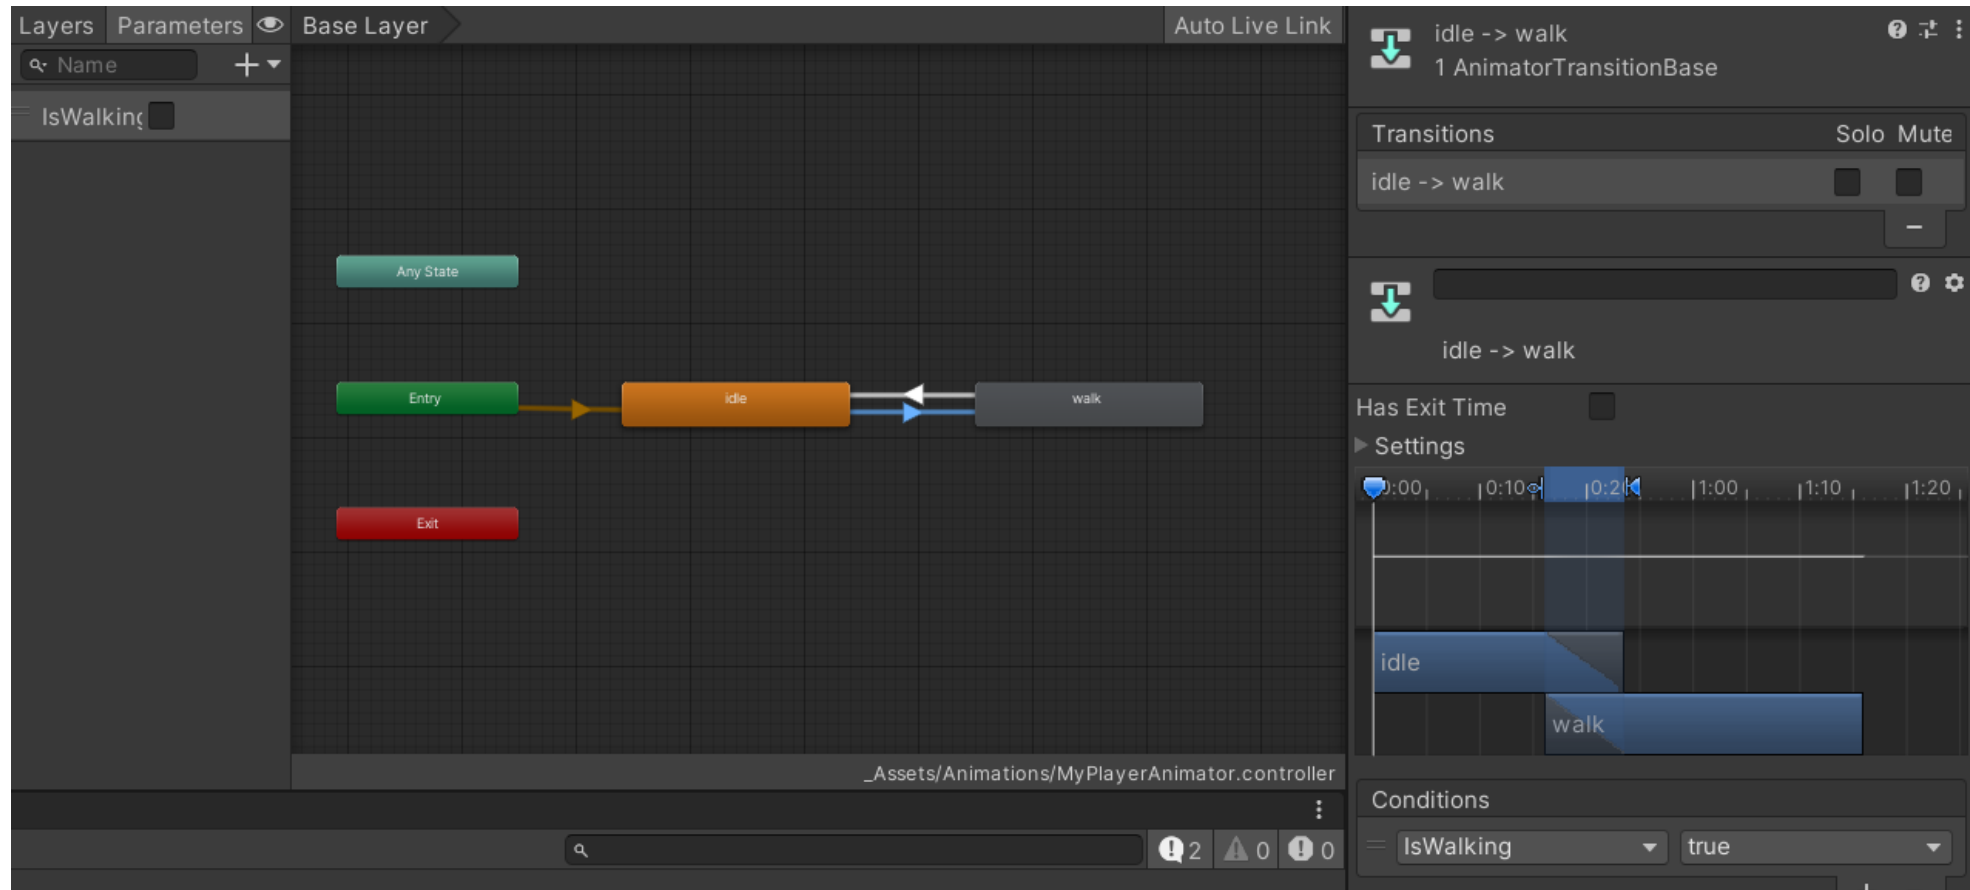

- Pada tab animation, klik Create, pilih folder dan nama, lalu simpan
- Jika sudah punya animasi, bisa klik kanan pada kanvas Animator, kemudian masukkan animasi pada field motion

To Animate (KeyFrame)

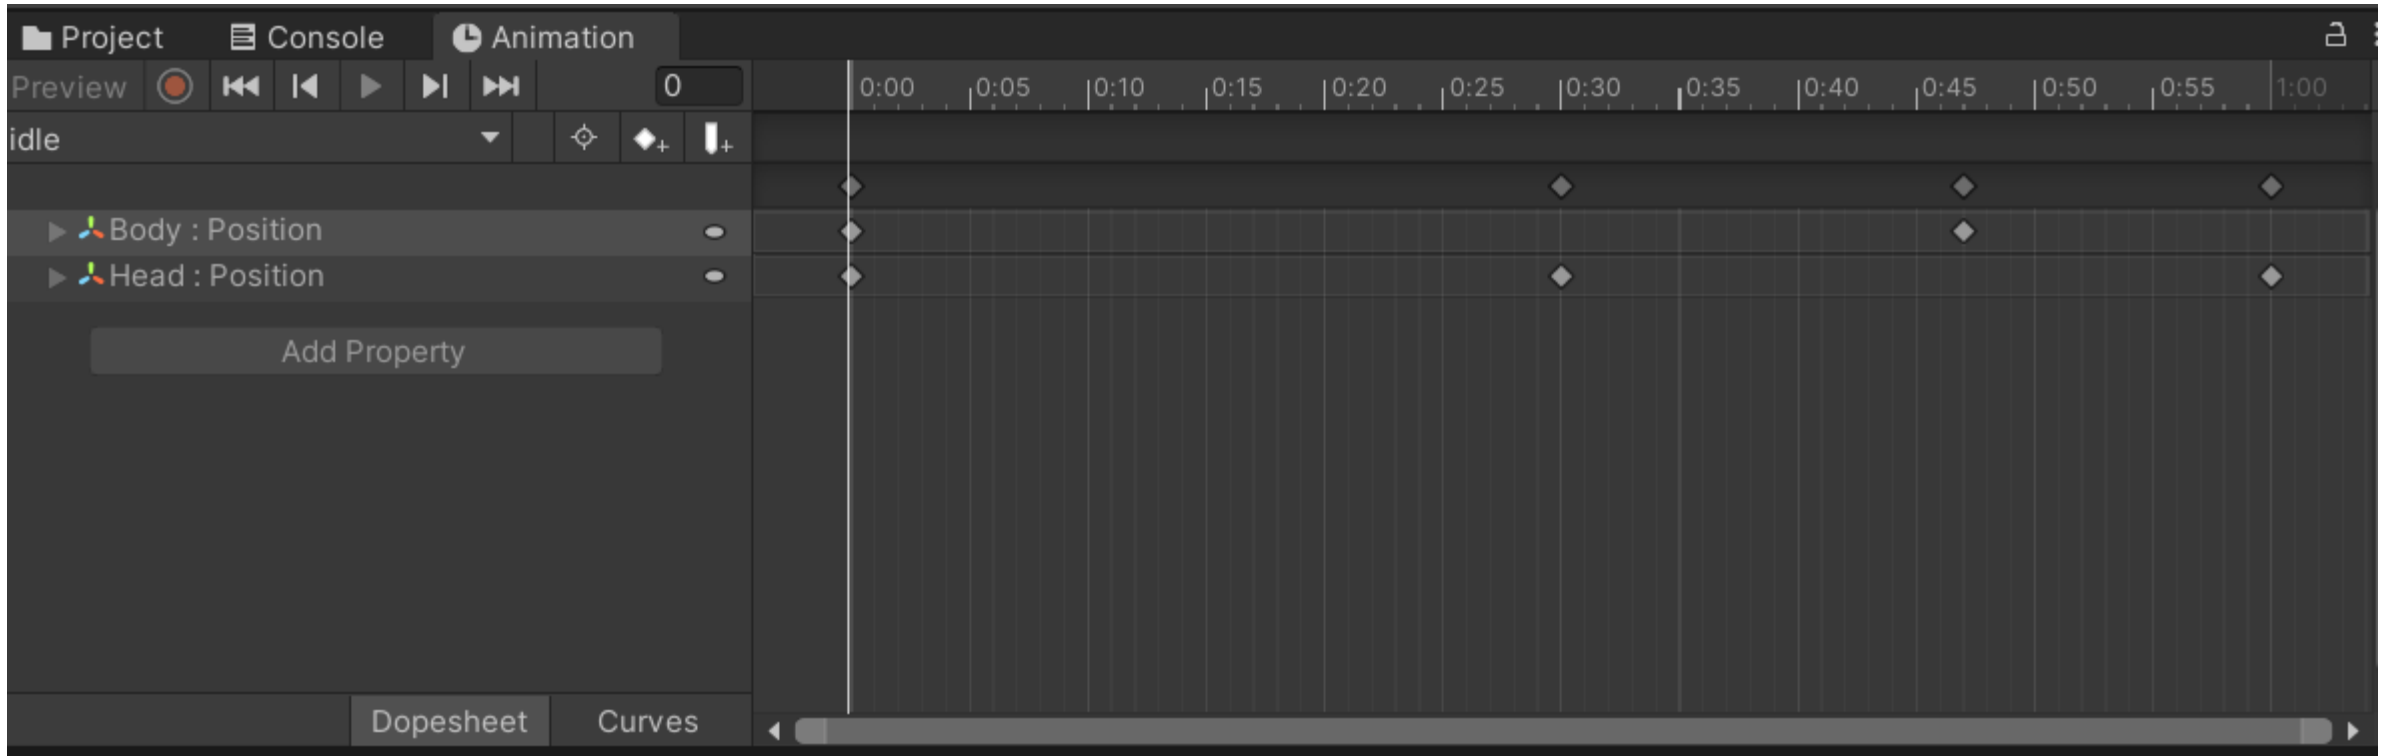

Buat animasi untuk player dengan menggerakkan object player, unity akan menandai gerakan tersebut pada keyframe

To Animate (Animator Parameters)

To Animate (Scripting)

Buat animasi untuk player dengan menggerakkan object player, unity akan menandai gerakan tersebut pada keyframe

Script Kontrol Animasi

Unity Script | 0 references

```
public class PlayerAnimator : MonoBehaviour
{
    private const string IS_WALKING = "IsWalking";
    [SerializeField] private Player player;
    private Animator animator;
    Unity Message | 0 references
    private void Awake()
    {
        animator = GetComponent<Animator>();
    }

    Unity Message | 0 references
    private void Update()
    {
        animator.SetBool(IS_WALKING, player.IsWalking());
    }
}
```

Script Reference animasi ke player

```
8      [SerializeField] private float moveSpeed = 7f;
9      private bool isWalking;
10     // Update is called once per frame
```

```
    //movement
    Vector3 moveDir = new Vector3(inputVector.x,0f,inputVector.y);
    transform.position += moveDir * moveSpeed * Time.deltaTime;
    isWalking = moveDir != Vector3.zero;
    Debug.Log("Jalan " + isWalking);

    //Rotation
    float rotateSpeed = 7f;
    transform.forward = Vector3.Slerp(transform.forward, moveDir, Time.deltaTime * rotateSpeed);
}

1 reference
public bool IsWalking()
{
    return isWalking;
}
```
